

Noisli provides a service of sound generation. Some examples of sounds are: forest, summer night. User is able to listen a random sound combination, random sound combination which supposes to help to get better productivity or to get better relaxing, as well as to create and save their own sound combination. It's possible to save a combination of one or more sounds with different level of volumes for its components.

Users can share the sound combinations via Google+, Facebook and Twitter social network.

Users can use web site, Android app or iOS app. There is also a Chrome extension available.

It's possible to listen to the sound without creating an account, as well as log in using Google+ and Facebook social networks.

It's possible to set up a timer for the period of sound generation.

Noisli provides also a simple text editor with an ability to save the entered text within the browser or export it. The editor supports also the markdown syntax.
