

Test scenarios in Gherkin were selected to be written for the simple use case:

- user opens Noisli
- user creates an account
- user logs in
- user creates a custom combination per their taste
- user saves the combination
- user launches timer
- user waits until timer ends
- user logs out

The 1st automation suite will cover the following from above:

- user opens Noisli
- user logs in
- user creates a custom combination per their taste
- user launches timer

This is a happy path scenario which lets the user to use the main functional of Noisli.

Implementation of "TO DO" sections will provide much higher level of confidence regarding the contents of the opened pages, dialogs, controls availability.
